

Akeel Akbar Portal

Project Summary | Lucky Draw Ticket Verification Platform

Overview

A web portal that digitizes lucky-draw ticket record-keeping, verification, and customer support. Customers submit their ticket details along with a payment screenshot; admins review and verify each submission, manage draws, publish winners, and communicate with customers through an in-app message thread. The portal does not conduct the draw itself — it only tracks and verifies submitted tickets.

Tech Stack

Layer	Technology
Framework	Next.js 16 (App Router) + React 19, TypeScript
Styling	Tailwind CSS 4
Database	Neon Serverless Postgres (single JSONB app_state document store)
File Storage	Vercel Blob (ticket payment screenshot uploads)
Authentication	Custom session auth — bcryptjs (password hashing) + jose (JWT sessions)
Validation	Zod schemas + custom regex validators
IDs	nanoid (reference IDs / record IDs)
Linting	ESLint 9 (eslint-config-next)

User Flow — Customer

- Land on homepage** — view active draw countdown, past winners, and how-it-works section.
- Submit a ticket** (multi-step form): select draw & quantity → enter payment method (JazzCash / EasyPaisa) & amount → enter personal info (name, phone, city, CNIC) → upload payment screenshot for verification → confirm and receive a unique reference ID.
- Track status** — use the reference ID or phone number on the Status page to check if a ticket is pending, verified, rejected, or cancelled.
- Optional account** — sign up / log in to view all of their submitted tickets in one place and chat with support via the message thread on a ticket.
- Winners page** — browse publicly announced winners lists.

User Flow — Admin

- Login** — role-based access (super_admin / operator).
- Dashboard** — overview stats (tickets, verification status, draws).
- Tickets** — review each submission's details and payment screenshot, then verify, reject, edit, or cancel it; add internal notes; reply to the customer via the message thread.
- Draws** — create/manage draws, set ticket price, active status, and countdown timer.
- Winners** — publish winners lists (name, address, prize) shown publicly.
- Customers** — view registered customer accounts.

- 7 **Conversations & Notifications** — monitor customer messages and system notifications.
- 8 **Reports** — export verified/all tickets; view summary reports.
- 9 **Audit Logs** — every verify / reject / edit / cancel action is logged for accountability.
- 10 **Settings** — portal configuration.

Key Characteristics

- Server-side validation and secure file uploads for every submission.
- Every ticket gets a unique, trackable reference ID.
- Full audit trail of all admin actions.
- Bilingual UI support (language switcher / i18n).
- Rate limiting on sensitive endpoints (auth, submissions).
